

Waste Management Solutions by Webtech Wireless®

Webtech Wireless solves critical operational and risk related challenges for waste management. Our solutions have the unique capabilities to give you the insight and business intelligence information you need to see a positive impact on budgets, reduce citizen complaints and improve collections operations. By using GPS/AVL reporting information, you will gain visibility on route progress in real-time, guarantee third-party contractor compliancy, and protect your agency from false claims.

Webtech Wireless knows government fleets. With a comprehensive end-to-end solution, government agencies can mitigate risk, optimize fleet utilization and lower overall operating costs.

Solving Your Business Challenges

- Optimize fleet utilization
- Monitor third-party contractors
- Reduce liability
- Streamline costs
- Maintain accountability to the public

Solution Features

- Five-second reporting
- Telemetry inputs e.g. arm up/down
- 311 integrations
- Citizen facing information
- Route completion reporting

What's #1 For You?

Accountability

Lower operating costs

Monitor contractors

Reduce liability

Increase vehicle utilization

Automate manual processes

Optimize Fleet Utilization

- With a Waste Management solution, fleet managers can track how often vehicles are being used and reassign vehicles to different branches or yards. By simply gaining visibility on vehicle activities, you can improve the efficiency of your operations and maximize the use of your equipment.

Monitor Third-Party Contractors

- Third party-contractors are critical to your operations. Use real-time GPS/AVL information to guarantee routes have been completed, send more vehicles to where additional support is required, and ensure third-party contractors remain compliant.

Reduce Liability and Manage Public Perceptions

- Collections vehicles are subject to complaints and litigation. With access to historical and real-time GPS/AVL data, you can dispute false claims and protect your agency.

Streamline Costs

- The cost of running a fleet is rising. Keep costs down by maximizing the use of your equipment and reallocating vehicles when and where required.
- Ensure citizen complaints are addressed immediately with GPS/AVL information. Use real-time mapping data to give call centers and 311 services access to vehicle location and vehicle activity.

Ensuring Accountability to the Public

- Remain accountable to your constituents. Citizens are watching when collections occur. GPS/AVL information gives visibility to which regions or districts are in progress and where on the assigned route the vehicle is presently at.

Real Customers, Real Solutions

"The large amount of data that the system is now providing gives us so much information on what's happening out on the street and we can use it in so many ways. We're working with Webtech Wireless to add more telemetry inputs that will give us more detailed information on the efficiency of our crews, the condition of our vehicles, and generally whether we're meeting a neighborhood's needs."

— Gregory De Weese, Member - IT Strategic Committee, City of Chicago

"Our [third-party contractor] compliance rate improved by 15 percent, which accounts for the remaining savings of more than half a million dollars."

— Dan O'Keefe, Manager of Road and Traffic Operations, City of Ottawa

Webtech Wireless is one of the top twenty global providers of GPS/AVL solutions, providing proven cost savings and risk management to government and commercial fleets.
